Project Name	Project – IoT Based Real-time River water quality monitoring and control system

We are reading the contents of the response, by calling the body property. The Response object has another useful property called status Code. This property contains the HTTP status codethat was returned as a result of makingthe HTTP call.

Program:

```
Future<void> getFamily() async {
http.Response response = await
http.get('https://example.com/api');
final Map<String, dynamic> responseData =
json.decode(response.body);
if (response.statusCode == 200 ||response.statusCode == 201)
{
else
{
THE Connection Failed!
}
return;
}
```
